

Mk-IX Technologies Corporation Changes name to Hygenall Corporation

Name Change Focuses On Solving Problems Relating to Lead and Toxic Metal Poisoning

Portsmouth, NH – June 24, 2009 – Mk-IX Technologies Corporation announces that it has changed its name to Hygenall Corporation. Chairman of the Board of Directors, Dr. Michael Lowe, made the announcement at the Company's Board of Director meeting held on June 10, 2009 via teleconference from Huntsville, AL. The announcement follows a vote by shareholders who approved the name change by a 100% majority.

Michael McKinnon, CEO, stated that "Hygenall Corporation is a name that more clearly reflects the company's focus on providing solutions to the problem of lead and other toxic metal exposure. We have begun to devote most of our resources, in both capital and personnel, towards building products, namely [Hygenall](#)[™], Hygenall Industrial[™], [Hygenall FieldScrub](#)[™] and products for the surface decontamination markets. This name change reflects the increased flexibility and the expanded ways that the company works with the various vertical markets."

Hygenall makes patent pending lead and toxic metal skin decontamination products. Leveraging a license for science developed in the laboratories of the Centers for Disease Control and Prevention (CDC), and the National Institute for Occupational Safety and Health (NIOSH), Hygenall's products represent a remarkable breakthrough in cleaning toxic metal off skin and preventing lead and other toxic metal poisoning by safely removing 98 percent of trace toxic metal particles including lead, cadmium, mercury, arsenic, and other toxic metals from exposed skin. Hygenall also offers products that are used to decontaminate surfaces and products.

Hygenall made news earlier this year when the [Wall Street Journal](#) published an article announcing the licensing of technology invented and patented by the Centers for Disease Control and Prevention for removing lead from skin. BusinessWeek magazine labeled Hygenall as one of "America's Most Promising Startups." The [online story](#) details the genesis of Hygenall's unique skin cleaner and its ability to remove lead dust and other toxic metals to prevent the harmful effects after ingesting.

"Following our February 2009 launch, we have been busy bringing Hygenall to market as the most effective cleaner that removes heavy metals from the skin — protecting the needs of families, industrial workers and military personnel."

Trace toxic metal particles can be found in metal smelting operations, battery recycling, lead and other toxic metal manufacturing operations, imported children's toys and common household products, and the urban battlefield and firing ranges.

Hygenall Corporation brands include [Hygenall](#)[™] Skin Cleaner for Home, **Hygenall Industrial**[™] for the workplace, [Hygenall FieldScrub](#)[™] a Battle Detritus Skin Cleansing System for troops in the urban battlefield, Firing Ranges, and sportsmen who use firearms, **Hygenall HygaStat**[™] a Blood Testing Skin Decontamination System, **Hygenall HygeneX**[™] for X-Ray and Imaging Room Decontamination System, **Hygenall Toxoff**[™] an Equipment, Surface and Wall Decontamination Wash Additive, and **Hygenall N.D.S.**[™] an Equipment Nuclear and Toxic Metal Decontamination Cleaning Solution.
